

# Thinfinity\_v3 Performans Ayarları

Thinfinity v3.0 ile ekstra performans iyileştirme için uygulanan adımlar şunlardır:

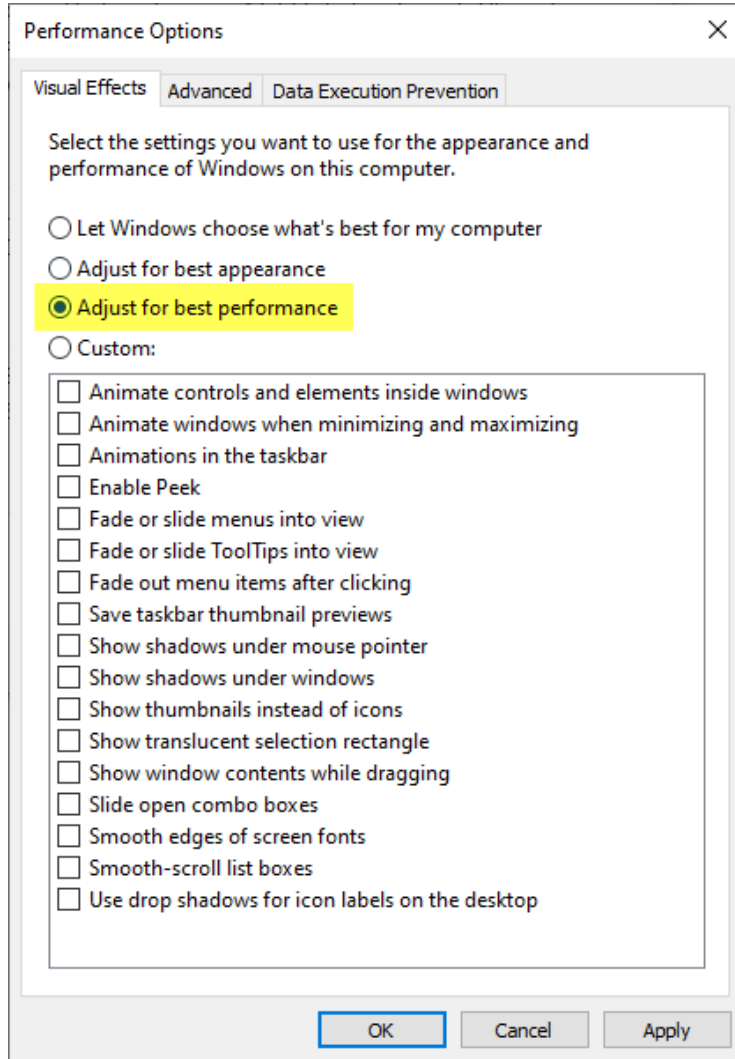

- Advance System Settings ekranı açılır.

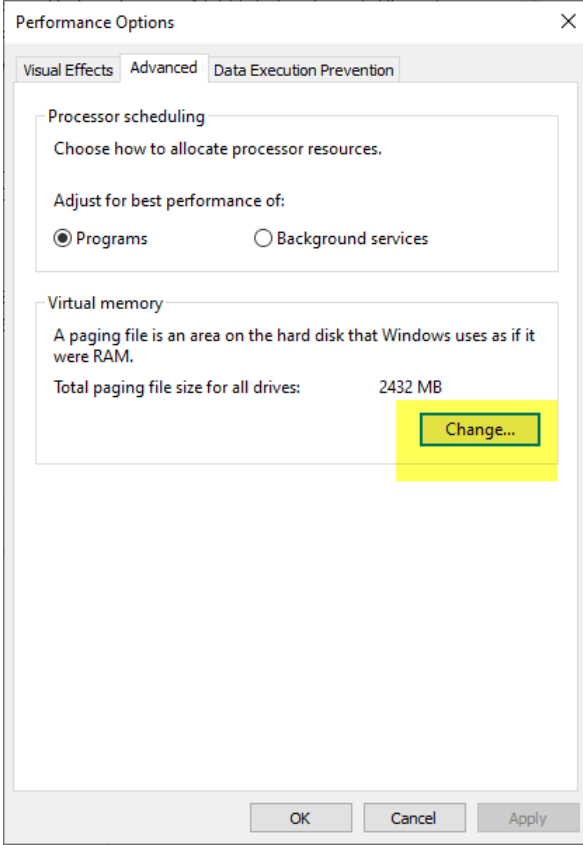

- Performance kısmında settings butonuna tıklanır.

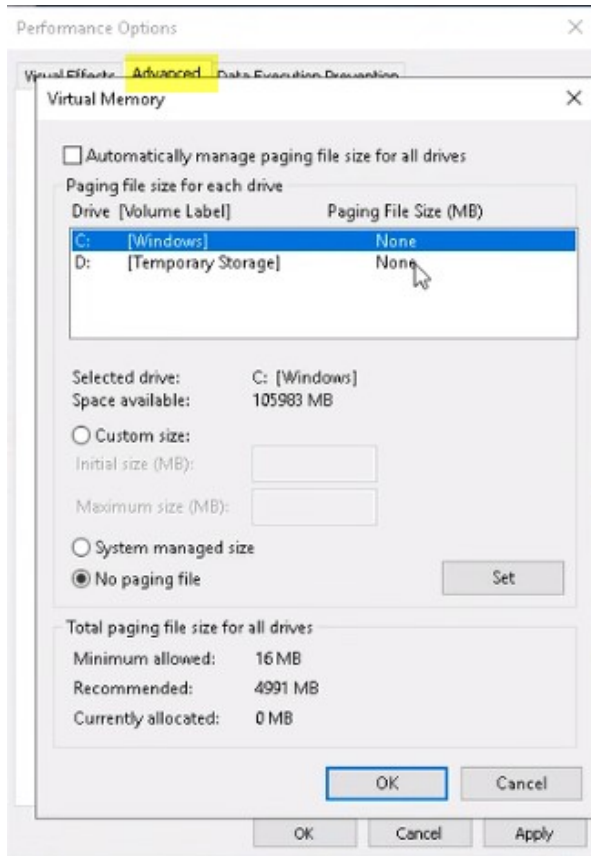

1-) Visual Effects sekmesinde "Adjust for best performance" radio button tıklanır.

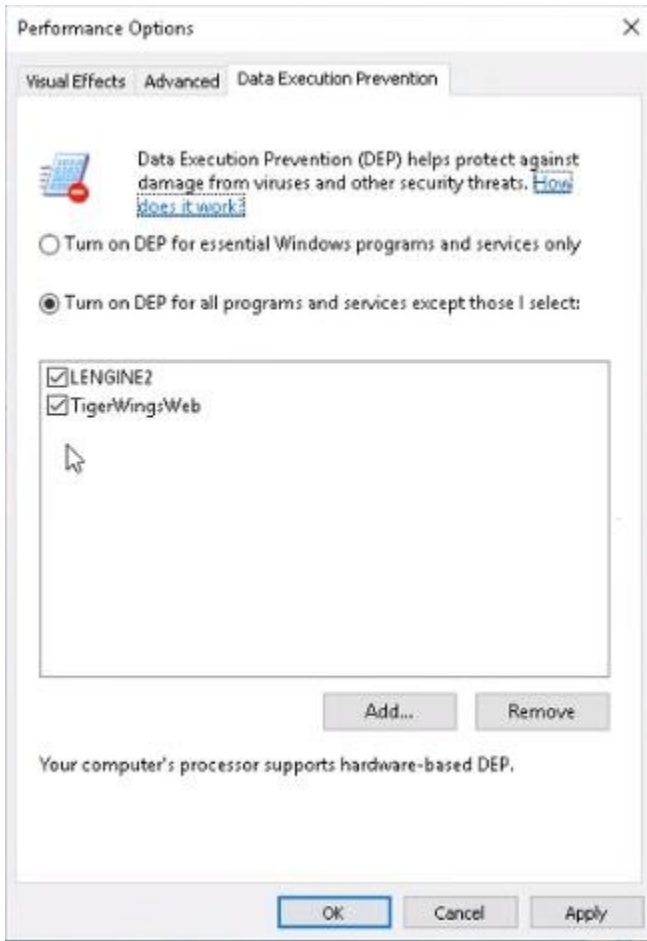

2-) Advanced sekmesinde change butonuna tıklanır.

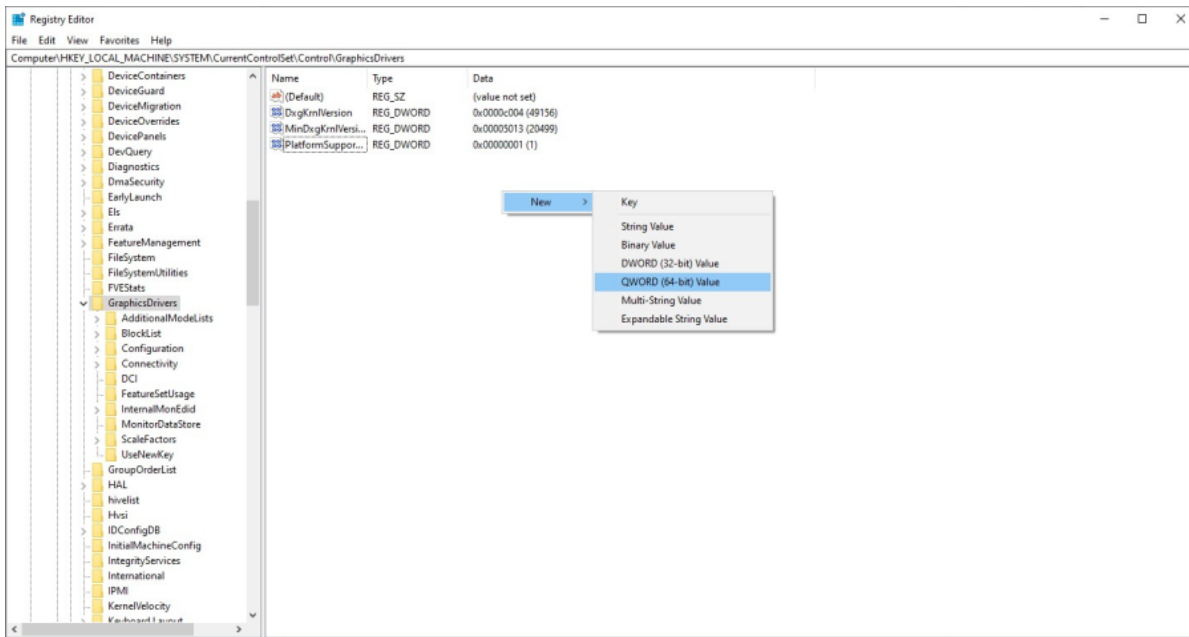

Virtual memory ekranında no paging file olarak set edilir.

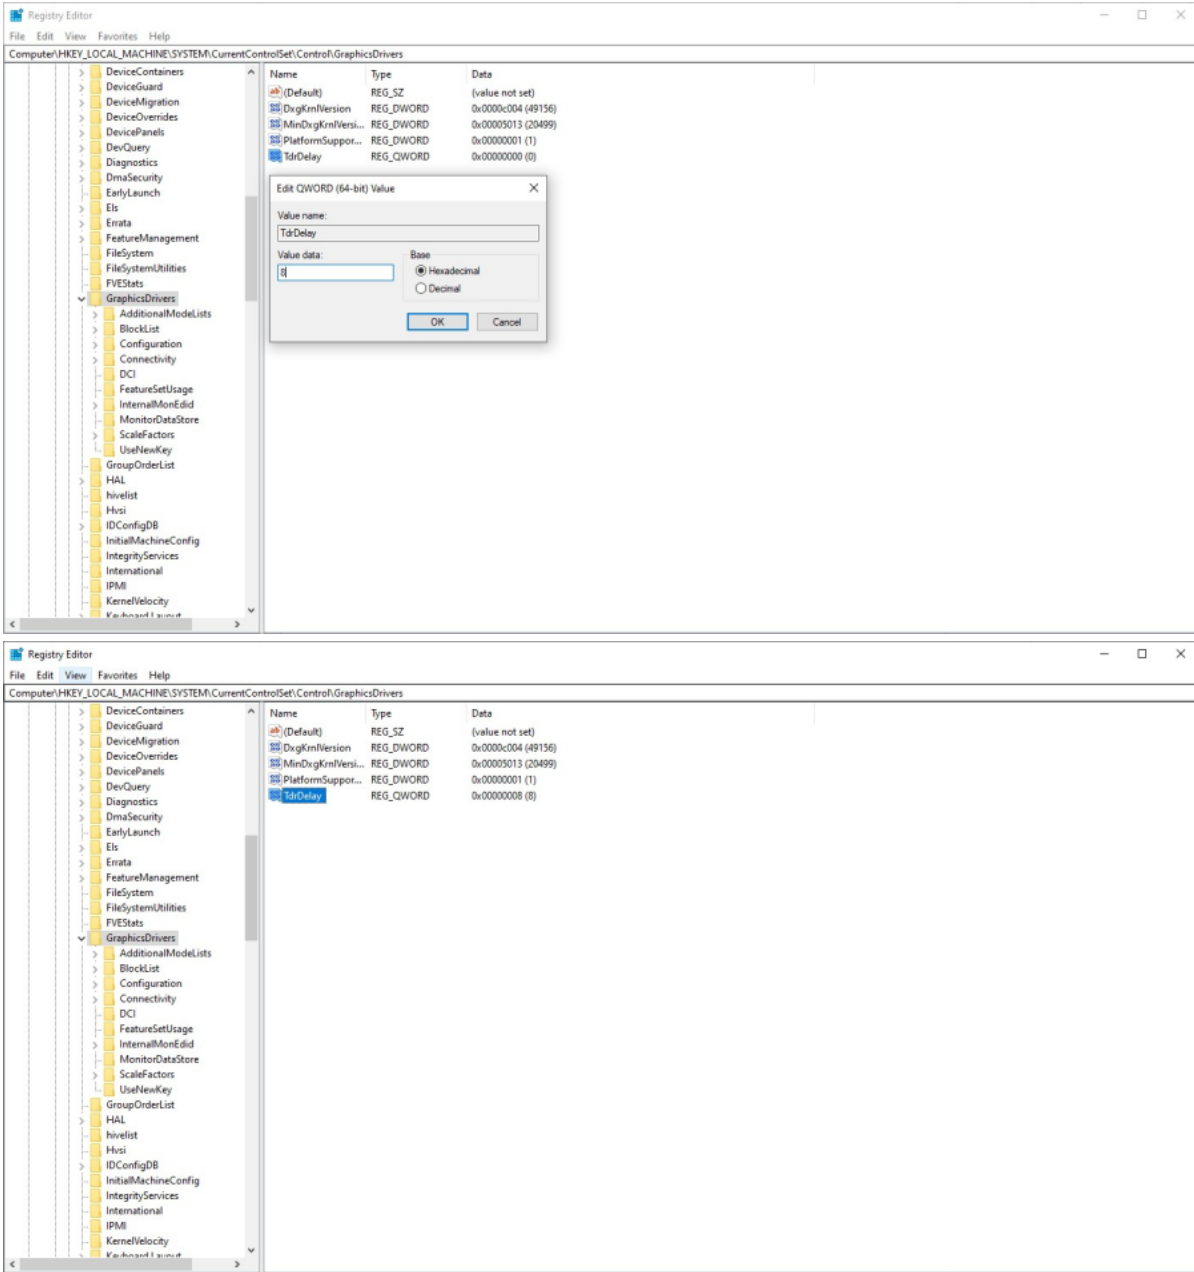

3-) Data Execution Prevention sekmesine wingsweb.exe add kısmından eklenir.

4-) Regedit ekranında "Computer\HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Control\GraphicsDrivers" yoluna gidilerek new-QWORD (64 Bit) Value seçeneği ile 8 değeri verilerek kayıt eklenir.

5-)Wings yönetim paneli üzerinde sessions sekmesinde mode kısmında "one browser per windows session" seçeneği seçilir.

Logo GO Wings requires at least one interactive Windows session. By default it uses the console session, sharing this session among all connected users.

You can configure Logo GO Wings to run under an alternate Windows session or, if you installed the Gateway, you can chose to balance memory usage/performance by configuring one session per user or distribute users evenly among a number of Windows sessions.

Mode: One Browser per Windows Session

☐ Allow running third-party applications

☐ Use the current interactive session or console

☒ Use these credentials:

☐ Use VirtualUI's logged-in credentials
